PART I. FINANCIAL INFORMATION AND MANAGEMENT'S DISCUSSION AND ANALYSIS:

Cautionary Statement Regarding Forward Looking Statements ........................................ 3

Unaudited Condensed Consolidated Balance Sheet - December 31, 2001 .......................... 4
CAUTIONARY STATEMENT REGARDING
FORWARD LOOKING STATEMENTS

Certain statements included in this quarterly report on Form 10-QSB which are not statements of historical fact are intended to be, and are hereby identified as, "forward-looking statements" within the meaning of the Private Securities Litigation Reform Act of 1995. The Company cautions readers that forward-looking statements involve known and unknown risks, uncertainties and other factors that may cause the actual results, performance or achievements of the Company to be materially different from any future results, performance or achievement expressed or implied by such forward-looking statements. Such factors include, among others, the following: the Company's inability to secure adequate capital to fund operating losses, working capital requirements, advertising and promotional expenditures and principal and interest payments on debt obligations; factors related to increased competition from existing and new competitors including new product introduction, price reduction and increased spending on marketing; limitations on the Company's opportunities to enter into and/or renew agreements with international partners, the failure of the Company or its partners to successfully market, sell, and deliver its product in international markets, and risks inherent in doing business on an international level, such as laws governing medical devices that differ from those in the U.S., unexpected changes in the regulatory requirements, political risks, export restrictions, tariffs, and other trade barriers, and fluctuations in currency exchange rates; the disruption of production at the Company's manufacturing facility due to raw material shortages, labor shortages, and/or physical damage to the Company's facilities; the Company's inability to manage its growth and to adapt its administrative, operational and financial control systems to the needs of the expanded entity and the failure of management to anticipate, respond to and manage changing business conditions; the loss of the services of executive officers and other key employees and the Company's continued ability to attract and retain highly-skilled and qualified personnel; the costs and other effects of litigation, governmental investigations, legal and administrative cases and proceedings, settlements and investigations; and developments or assertions by or against the Company relating to intellectual property rights.

NOTE 1 - Basis of Presentation

The accompanying financial statements are unaudited but in the opinion of management contain all the adjustments (consisting of those of a normal recurring nature) considered necessary to present fairly the financial position and the results of operations and cash flow for the periods presented in conformity with generally accepted accounting principles for interim financial information and the instructions to Form 10-QSB and Article 10 of Regulation S-X. Accordingly, they do not include all of the information and footnotes required by generally accepted accounting principles for complete financial statements.

Operating results for the three months ended December 31, 2001 are not necessarily indicative of the results that may be expected for the fiscal year ending September 30, 2002. For further information, refer to the consolidated financial statements and footnotes thereto included in the Company's annual report on Form 10-KSB for the fiscal year ended September 30, 2001.

Principles of consolidation and nature of operations:

The consolidated financial statements include the accounts of the Company and its wholly-owned subsidiaries, The Female Health Company - UK and The Female Health Company - UK, plc. All significant intercompany transactions and accounts have been eliminated in consolidation. The Female Health Company ("FHC" or the "Company") is currently engaged in the marketing, manufacture and distribution of a consumer health care product known as the female condom, "FC," in the U.S. and "femidom", "femy" and "the female condom" outside the U.S. The Female Health Company - UK, is the holding company of The Female Health Company - UK, plc, which operates a 40,000 sq. ft. leased manufacturing facility located in London, England.

NOTE 2 - Earnings Per Share

Earnings per share (EPS): Basic EPS is computed by dividing income available to common stockholders by the weighted average number of common shares outstanding for the period. Diluted EPS is computed giving effect to all dilutive potential common shares that were outstanding during the period. Dilutive potential common shares consist of the incremental common shares issuable upon conversion of convertible preferred or convertible debt and the exercise of stock options and warrants for all periods. Fully diluted (loss) per share is not presented since the effect would be anti-dilutive.

NOTE 3 - Comprehensive Income (Loss)

Total Comprehensive Loss was $(362,240) for the three months ended December 31, 2001 and $(626,388) for the three months ended December 31, 2000.
NOTE 4 - Inventories

The components of inventory consist of the following:

<table>

</tbody>
</table>

NOTE 5 - Financial Condition

The Company's consolidated financial statements have been prepared on a going concern basis which contemplates the realization of assets and the settlement of liabilities and commitments in the normal course of business. The Company incurred a net loss of $.4 million for the three months ended December 31, 2001 and as of December 31, 2001 had an accumulated deficit of $50.7 million. At December 31, 2001, the Company had working capital of $1.0 million and stockholders' equity of $.1 million. In the near term, the Company expects operating and capital costs to continue to exceed funds generated from operations due principally to the Company's manufacturing costs relative to current production volumes and the ongoing need to commercialize the Female Condom around the world. As a result, operations in the near future are expected to continue to use working capital. Management recognizes that the Company's continued operations may depend on its ability to raise additional capital through a combination of equity or debt financing, strategic alliances and increased sales volumes.

At various points during the developmental stage of the product, the Company was able to secure resources, in large part through the sale of equity and debt securities, to satisfy its funding requirements. As a result, the Company was able to obtain FDA approval, worldwide rights, manufacturing facilities and equipment and to commercially launch the Female Condom.

Management believes that developments, including the Company's agreement with the UNAIDS, a joint United Nations program on HIV/AIDS, and various distribution partners in major countries, provide an indication of the Company's success in broadening awareness and distribution of the Female Condom and may benefit future efforts to raise additional capital and to secure additional agreements to promote and distribute the Female Condom throughout other parts of the world.
On May 18, 2001 the Company entered into an agreement with Heartland Bank providing for a $2,000,000 credit facility. The unpaid balances on the credit facility are due May 18, 2004 and bear interest payable at a rate of 10% per annum. The agreement contains certain covenants which include restrictions on the payment of dividends and distributions and on the issuance of warrants. The Company may borrow under the credit facility from time to time subject to a number of conditions, including obtaining personal guarantees of 125% of the amount outstanding under the loan. In connection with the credit facility, the Company issued warrants to Heartland Bank to purchase the number of shares of the Company's Common Stock equal to $500,000 divided by the warrant purchase price as of the date of exercise. The warrant purchase price is equal to 70% of the "market price" of the Common Stock as of the day immediately prior to the date the exercise notice is given to the Company, but in no event shall the per share price be less than $.50 or more than $1.00. In accounting for Heartland Bank's warrants, the Company has designated 1,000,000 warrants valued at $270,800 and these are recorded by the Company as additional paid in capital and a discount on the credit facility.

The Company initially borrowed $1,500,000 under the credit facility and obtained guarantees of five persons equal in total to the amount outstanding under the loan. Three of the guarantors are directors of the Company and one of the guarantors is a trust for the benefit of the Company's Chairman and Chief Executive Officer. Each guarantor may be liable to Heartland Bank for up to 125% of the guarantor's guarantee amount if we default under the credit facility. The Company issued warrants to the five guarantors to purchase the number of shares of the Company's Common Stock equal to the guarantee amount of such guarantor divided by the warrant purchase price as of the date of exercise. The warrant purchase price is equal to 70% of the "market price" of the Common Stock as of the day immediately prior to the date the exercise notice is given to the Company, but in no event shall the per share price be less than $.50 or more than $1.00. The Company also issued additional warrants to purchase 100,000 shares of Common Stock to two guarantors with a warrant purchase price of $0.50 per share. In accounting for the guarantors' warrants, the Company has designated 3,200,000 warrants valued at $667,578 and these are recorded by the Company as additional paid in capital and a discount on the credit facility.

On December 18, 2001 and December 20, 2001 the Company borrowed an additional aggregate $400,000 under the credit facility initially entered into on May 18, 2001. The Company obtained guarantees from two individuals to guarantee the additional amount outstanding on the credit facility. Each guarantor may be liable to Heartland Bank for up to 125% of the guarantor's guarantee amount if we default under the credit facility. The Company issued warrants to the two guarantors to purchase the number of shares of the Company's Common Stock equal to the guarantee amount of such guarantor divided by the warrant purchase price on the date of exercise. The warrant purchase price is equal to 70% of the "market price" of the Common Stock as of the day immediately prior to the date the exercise notice is given to the Company, but in no event shall the per share price be less than $.50 or more than $1.00. The Company also issued an additional warrant to purchase 100,000 shares of Common Stock to one of the guarantors with a warrant purchase price of $0.50 per share. In accounting for the guarantors' warrants, the Company has designated 900,000 warrants valued at $326,127 and these are recorded by the Company as additional paid in capital and a discount on the credit facility.

During the three months ended December 31, 2001, the Company completed a private placement where 120,000 shares of the Company's common stock were sold for $60,000. The stock sale was directly with an accredited investor. The Company sold the shares to this investor at a price of $.50 per share.
Until internally generated funds are sufficient to meet cash requirements, FHC will remain dependent upon its ability to generate sufficient capital from outside sources. While management believes that net revenues from sales of the Female Condom will eventually exceed operating costs and that ultimately operations will generate sufficient funds to meet capital requirements, there can be no assurance that such level of operations will ultimately be achieved, or be achieved in the near term. Likewise, there can be no assurance that the Company will be able to source all or any portion of its required capital through the sale of debt or equity or, if raised, the amount will be sufficient to operate the Company until sales of the Female Condom generate sufficient net revenues to fund operations. In addition, any funds raised may be costly to the Company and/or dilutive to stockholders. If the Company is not able to source the required funds or any future capital which becomes required, the Company may be forced to sharply curtail the Company's efforts to promote the female condom, to attempt to sell certain of its assets and rights or to curtail certain of its operations and may ultimately be forced to cease operations. Currently, the Company is focused on growing its business and, therefore, the Company has made no plans to sell any assets nor has it identified any assets to be sold or potential buyers. All of the Company's assets are also subject to a first security interest by the holders of convertible debentures that the Company issued in May and June 1999. Although the Company repaid the principal amount outstanding under the convertible debentures in May 2001, the holders of the convertible debentures have not acted to terminate the security interest in the Company's assets and a former holder of $1,500,000 of the convertible debentures has alleged that the Company was in default as described in Note 7 below. The Company disputes the claims made by this holder. If this security interest is not released, any sale of the Company's assets would have to be made subject to this security interest.
NOTE 6 - Industry Segments And Financial Information About Foreign and Domestic Operations

The Company currently operates primarily in one industry segment which includes the development, manufacture and marketing of consumer health care products.

The Company operates in foreign and domestic regions. Information about the Company's operations by geographic area is as follows:

NOTE 7 - Contingent Liabilities
-----------------------

The testing, manufacturing and marketing of consumer products by the Company entail an inherent risk that product liability claims will be asserted against the Company. The Company maintains product liability insurance coverage for claims arising from the use of its products. The coverage amount is currently $5,000,000 for FHC's consumer health care product.

A former holder of the $1,500,000 convertible debentures issued on May 19, 1999 and June 3, 1999 has alleged that the Company was in default with respect to the perfection of the investors' security interest in the Company's assets. The investor had demanded the issuance of 1,500,000 shares of the Company's common stock to the investors due to this default. The Company disputes this claim and intends to vigorously defend its position.

NOTE 8. - Related Parties
-----------------

It has been and currently is the policy of the Company that transactions between the Company and its officers, directors, principal shareholders or affiliates are to be on terms no less favorable to the Company than could be obtained from unaffiliated parties. The Company intends that any future transactions between the Company and its officers, directors, principal shareholders or affiliates will be approved by a majority of the directors who are not financially interested in the transaction.
GENERAL

The Female Health Company ("FHC" or the "Company") manufactures, markets and sells the female condom, the only FDA-approved product under a woman's control which can prevent unintended pregnancy and sexually transmitted diseases ("STDs"), including HIV/AIDS.

The female condom has undergone extensive testing for efficacy, safety and acceptability, not only in the United States but also in many countries around the world. Certain of these studies show that having the female condom available allows women to have more options, resulting in an increase in protected sex acts and a decrease in STDs, including HIV/AIDS.

The product is currently sold or available in various venues including commercial (private sector) and public sector clinics in over 80 countries. It is commercially marketed in 17 countries by various FHC country specific partners, including the United States, United Kingdom, Japan, Canada, Holland, France, Venezuela, and Brazil. The Company recently signed a non-binding memorandum of understanding with Hindustan Latex Limited for distribution in India.

As noted above, the female condom is sold to the global public sector. In the U.S., the product is marketed to city and state public health clinics as well as not-for-profit organizations such as Planned Parenthood. Under an agreement with UNAIDS, UNAIDS facilitates the availability and distribution of the female condom in the developing world and the Company sells the product to developing countries at a reduced price based on the Company's cost of production. The current price per unit is approximately 0.38 (Pounds), or approximately $0.55. Currently over 80 developing countries purchase the female condom under the terms of this agreement.

Product

The female condom is made of polyurethane, a thin but strong material which is resistant to rips and tears during use. The female condom consists of a soft, loose fitting sheath and two flexible O rings. One of the rings is used to insert the device and helps to hold it in place. The other ring remains outside the vagina after insertion. The female condom lines the vagina, preventing skin from touching skin during intercourse. The female condom is pre-lubricated and disposable and is intended for use during only one sex act.

Raw Materials

Polyurethane is the principal raw material the Company uses to produce the female condom. The Company has entered into a supply agreement with Deerfield Urethane, Inc. for the purchase of all of the Company's requirements of polyurethane. Under this agreement, the parties negotiate pricing on an annual basis. The original term of the agreement extended to December 31, 1995 and thereafter automatically renews for additional one year periods unless either party gives at least 12 months prior written notice of termination.
Global Market Potential

It is more than twenty years since the first clinical evidence of AIDS was noted. HIV/AIDS is the most devastating pandemic that humankind has faced in recorded history. UNAIDS and the World Health Organization ("WHO") estimate that more than 60 million people have been infected with the virus and that, at the end of 2001, 40 million people globally were living with HIV. AIDS is not the only sexually transmitted disease that the global public health community is battling. In the United States, the Center for Disease Control and Protection noted that one in five Americans over the age of 12 has Herpes and 1 in every 3 sexually active people will get an STD by age 24. Women are currently the fastest growing group infected with HIV and are expected to comprise the majority of the new cases in the coming year.

Currently there are only two products that prevent the transmission of HIV/AIDS through sexual intercourse -- the latex male condom and the female condom.

Male Condom Market: It is estimated the global annual market for male condoms is close to 5 billion units. However, the majority of all acts of sexual intercourse, excluding those intended to result in pregnancy, are completed without protection. As a result, it is estimated the potential market for barrier contraceptives is much larger than the identified male condom market.

Advantages Versus the Male Condom

The female condom is currently the only available barrier contraceptive method controlled by women which allows them to protect themselves from unintended pregnancy and STDs, including HIV/AIDS. The most important advantage is that using the female condom, a woman has a prevention method she controls as many men do not like to wear male condoms and may refuse to do so.

The polyurethane material that is used for the female condom offers a number of benefits over latex, the material that is most commonly used in male condoms. Polyurethane is much stronger than latex, reducing the probability that the female condom sheath will tear during use. Unlike latex, polyurethane quickly transfers heat, so the female condom immediately warms to body temperature when it is inserted, which may result in increased pleasure and sensation during use. The product offers an additional benefit to the 7% to 20% of the population that is allergic to latex and who, as a result, may be irritated by latex male condoms. To the Company’s knowledge, there is no reported allergy to date to polyurethane. The female condom is also more convenient, providing the option of insertion hours before sexual arousal and as a result is less disruptive during sexual intimacy than the male condom which requires sexual arousal for application.
Cost Effectiveness

Various studies have been reported in the literature on the cost-effectiveness of the female condom. The studies show that making the female condom available is highly cost effective in reducing public health costs in developing countries as well as in the U.S. Further studies show that including the female condom in prevention programs to high risk groups is not only cost-effective but cost-saving.

Worldwide Regulatory Approvals

The female condom received Pre-Market Approval ("PMA") as a Class III Medical Device from the U.S. Food and Drug Administration ("FDA") in 1993. The extensive clinical testing and scientific data required for FDA approval laid the foundation for approvals throughout the rest of the world, including receipt of a CE Mark in 1997 which allows the Company to market the female condom throughout the European Union ("EU"). In addition to the United States and the EU, several other countries have approved the female condom for sale, including Canada, Russia, Australia, Japan, South Korea and Taiwan.

The Company believes that the female condom's PMA and FDA classification as a Class III Medical Device create a significant barrier to entry. The Company estimates that it would take a minimum of four to six years to implement, execute and receive FDA approval of a PMA to market another type of female condom.

The Company believes there are no material issues or material costs associated with the Company's compliance with environmental laws related to the manufacture and distribution of the female condom.

Strategy

The Company's strategy is to act as a manufacturer, selling the female condom to the global public sector, United States public sector and commercial partners for country-specific marketing. The public sector and commercial partners assume the cost of shipping and marketing the product. As a result, as volume increases, the Company's operating expenses will not increase significantly.

Commercial Markets

The Company markets the product directly in the United Kingdom. The Company has distribution agreements with commercial partners in 17 countries including the United States, Japan, Canada, Brazil, Venezuela, Denmark, Holland and France and recently signed a non-binding memorandum of understanding with Hindustan Latex Limited in India. The agreements are generally exclusive for a single country. Under these agreements, each partner markets and distributes the female condom in a single country and the Company manufacturers the female condom and sells the product to the partner for distribution in that country.
Currently, it is estimated more than 1.5 billion male condoms are distributed worldwide by the public sector each year. The female condom is seen as an important addition to prevention strategies by the public sector because studies show that the availability of the female condom decreases the amount of unprotected sex by as much as 25% over male condoms alone.

The Company has an agreement with UNAIDS to supply the female condom to developing countries at a reduced price which is negotiated each year based on the Company’s cost of production. The current price per unit is approximately 0.38 (pounds), or approximately $0.55. Under the agreement, UNAIDS and the Company cooperate in education efforts and marketing the female condom in developing countries. Sales of the female condom are made directly to public health authorities in each country at the price established by the agreement with UNAIDS. The term of the agreement currently expires on December 31, 2002, but automatically renews for additional one-year periods unless either party gives at least 90 days prior written notice of termination. The female condom is available in over 80 countries through public sector distribution.

In the United States, the product is marketed to city and state public health clinics, as well as not-for-profit organizations such as Planned Parenthood. Currently significant programs are ongoing in 17 major cities and states.

State-of-the-Art Manufacturing Facility

The Company manufactures the female condom in a 40,000 square-foot leased facility in London, England. The facility is currently capable of producing 60 million units per year. With additional equipment, this capacity can be significantly increased.

Government Regulation

In the U.S., the female condom is regulated by the FDA. Pursuant to section 515(a)(3) of the Safe Medical Amendments Act of 1990 (the "SMA Act"), the FDA may temporarily suspend approval and initiate withdrawal of the PMA if the FDA finds that the female condom is unsafe or ineffective, or on the basis of new information with respect to the device, which, when evaluated together with information available at the time of approval, indicates a lack of reasonable assurance that the device is safe or effective under the conditions of use prescribed, recommended or suggested in the labeling. Failure to comply with the conditions of FDA approval invalidates the approval order. Commercial distribution of a device that is not in compliance with these conditions is a violation of the SMA Act.
Competition

The Company's female condom participates in the same market as male condoms but is not seen as directly competing with male condoms. Rather, the Company believes that providing the female condom is additive in terms of prevention and choice. Latex male condoms cost less and have brand names that are more widely recognized than the female condom. In addition, male condoms are generally manufactured and marketed by companies with significantly greater financial resources than the Company. It is also possible that other parties may develop a female condom. These competing products could be manufactured, marketed and sold by companies with significantly greater financial resources than those of the Company.

Patents and Trademarks

The Company currently holds product and technology patents in the United States, Japan, the United Kingdom, France, Italy, Germany, Spain, the European Patent Convention, Canada, The People's Republic of China, Brazil, South Korea and Australia. These patents expire between 2005 and 2013. Additional technology patents are pending in Japan. The patents cover the key aspects of the female condom, including its overall design and manufacturing process. The Company terminated its license of the trademark "Reality" in the United States and now has the registered trademark FC Female Condom in the United States. The Company has trademarks on the names "femidom" and "femy" in certain foreign countries. The Company has also secured, or applied for, 13 trademarks in 26 countries to protect the various names and symbols used in marketing the product around the world. In addition, the experience that has been gained through years of manufacturing the female condom has allowed the Company to develop trade secrets and know-how, including certain proprietary production technologies that further secure its competitive position.

RESULTS OF OPERATIONS

THREE MONTHS ENDED DECEMBER 31, 2001 COMPARED TO THREE MONTHS ENDED DECEMBER 31, 2000

The Company had net revenues of $1,670,171 and a net loss attributable to common stockholders of $389,561 for the three months ended December 31, 2001 compared to net revenues of $1,213,625 and a net loss attributable to common stockholders of $652,620 for the three months ended December 31, 2000.

The Company's operating loss for the three months ended December 31, 2001 was $200,498 compared to $502,580 for the same period last year for a decrease of 60%. As discussed more fully below, the decrease in the Company's operating loss was a result of an increase in gross profit coupled with a decrease in operating expenses. The decrease in the net loss of 42% resulted from the reduction in the operating loss, offset by an increase in non-operating interest expenses.
Net revenues increased $456,546 in the current quarter, or 38%, compared with the same period last year. The higher net revenues occurred because of higher unit sales shipped to global customers.

The Company expects significant quarter to quarter variation due to the timing of receipt of large orders, subsequent production scheduling, and shipping of products as various countries launch the product. The Company believes this variation between quarters will continue for several quarters to come until reorders form an increasing portion of total net revenues.

Cost of products sold increased $241,532 to $1,371,406 in the current quarter from $1,129,874 for the same period last year. The cost of products sold increase of 21% on a 38% sales increase resulted in a improvement in costs of products sold as a percentage of sales from 82% in the current quarter compared to 93% during the same period in the prior year. As unit sales increase, fixed manufacturing costs do not increase, enabling the Company to produce at a lower cost of goods sold per unit. Due to this change gross profit increased $215,014, or 257%, to $298,765 from $83,751 during the first quarter of fiscal 2001.

Advertising and promotion expenses decreased $75,140 to $10,941 in the current quarter from $86,081 for the same period in the prior year. The decline resulted from a reduction in promotion expenses between the current quarter and the first quarter of fiscal 2001.

Selling, general and administrative expenses decreased $11,928, or 2%, to $488,322 in the current quarter from $500,250 for the same period last year. The change reflects the impact of a reduction of consulting expenses offset by higher legal fees in the current quarter compared to legal fees incurred in the prior fiscal year's first quarter.

Total operating expenses decreased $87,068, or 15%, to $499,263 in the current quarter from $586,331 in the same period of the prior year. As a percent of sales total operating expenses were 30% in the current quarter compared to 48% during the same period in the prior year.

Net interest and other expenses increased $39,023 to $155,792 for the current period from $116,769 for the same period last year. The increase occurred because the Company had a larger amount of non-cash expenses incurred from the amortization of discounts on notes payable and convertible debentures than the first quarter of the prior year.

Factors That May Affect Operating Results and Financial Condition

The Company's future operating results and financial condition are dependent on the Company's ability to increase demand for and to cost-effectively manufacture sufficient quantities of the female condom. Inherent in this process is a number of factors that the Company must successfully manage in order to achieve favorable future results and improve its financial condition.
Reliance on a Single Product

The Company expects to derive the vast majority, if not all, of its future net revenues from the female condom, its sole current product. While management believes the global potential for the female condom is significant, the product is in the early stages of commercialization and, as a result, the ultimate level of consumer demand around the world is not yet known. To date, sales of the female condom have not been sufficient to cover the Company's operating costs, on an annual basis.

Distribution Network

The Company's strategy is to act as a manufacturer and to develop a global distribution network for the product by completing partnership arrangements with companies with the necessary marketing and financial resources and local market expertise. To date, this strategy has resulted in numerous in-country distributions in the public sector, particularly in Africa, Latin America and recently in India. Several partnership agreements have been completed for the commercialization of the female condom in private sector markets around the world. However, the Company is dependent on country governments as well as city and state public health departments within the United States to continue their commitment to prevention of STDS, including AIDS, by including female condoms in their programs. The Company is also dependent on finding appropriate partners for the private sector markets around the world. Once an agreement is completed, the Company is reliant on the effectiveness of its partners to market and distribute the female condom or failure of country governments to implement prevention programs which include distribution of barrier methods against the AIDS crisis, or an inability of the Company to secure additional agreements for AIDS crisis, or an inability of the Company to secure additional agreements for new markets either in the public or private sectors could adversely affect the Company's financial condition and results of operations.

As part of this strategy the Company has entered into two recent agreements.

On November 29, 2001, the Company signed a non-binding memorandum of understanding with Hindustan Latex Limited ("HLL"), an Indian government organization and India's largest male condom manufacturer. HLL distributes to public sector customers including government and non-government organizations and to consumers through 160,000 retail outlets. Jointly with HLL a marketing strategy will be developed for the country of India. Over time, the Company anticipates that HLL and the Company will explore manufacturing options within India.

On December 18, 2001, the Company announced the appointment of Total Access Group ("TAG") as the exclusive distributor for public sector sales within a 15 state region in the western United States. TAG is a privately held national distributor to the United States public sector and serves over 2,500 customers, which include state and local health departments, community based organizations, HIV/STD prevention organizations, Planned Parenthood clinics and family planning organizations. TAG is a full service distributor and will provide marketing, education and customer service support. TAG is required to purchase 2,190,000 units within a three year period to retain exclusive distribution rights.
Inventory and Supply

All of the key components for the manufacture of the female condom are essentially available from either multiple sources or multiple locations within a source.

Global Market and Foreign Currency Risks

The Company manufactures the female condom in a leased facility located in London, England. Further, a material portion of the Company's sales are in foreign markets. Manufacturing costs and sales to foreign markets are subject to normal currency risks associated with changes in the exchange rate of foreign currencies relative to the United States dollar. To date, the Company's management has not deemed it necessary to utilize currency hedging strategies to manage its currency risks. On an ongoing basis, management continues to evaluate its commercial transactions and is prepared to employ currency hedging strategies when it believes such strategies are appropriate. In addition, some of the Company's future international sales may be in developing nations where dramatic political or economic changes are possible. Such factors may adversely affect the Company's results of operations and financial condition.

Government Regulation

The female condom is subject to regulation by the FDA, pursuant to the federal Food, Drug and Cosmetic Act (the "FDCA"), and by other state and foreign regulatory agencies. Under the FDCA, medical devices must receive FDA clearance before they can be sold. FDA regulations also require the Company to adhere to certain "Good Manufacturing Practices," which include testing, quality control and documentation procedures. The Company's compliance with applicable regulatory requirements is monitored through periodic inspections by the FDA. The failure to comply with applicable regulations may result in fines, delays or suspensions of clearances, seizures or recalls of products, operating restrictions, withdrawal of FDA approval and criminal prosecutions. The Company's operating results and financial condition could be materially adversely affected in the event of a withdrawal of approval from the FDA.

Liquidity and Sources of Capital

Historically, the Company has incurred cash operating losses relating to expenses incurred to develop and promote the Female Condom. During the three months ended December 31, 2001, cash used in operations totaled $.1 million. The Company used net proceeds from the issuance of the Company's common stock and additional borrowings on the company's credit facility to fund cash used in operations, capital expenditures, payment of preferred stock dividends and an increase in its cash position.

Until internally generated funds are sufficient to meet cash requirements, the Company will remain dependent upon its ability to generate sufficient capital from outside sources.
At December 31, 2001, the Company had current liabilities of $1.7 million including a $1.0 million note payable due March 25, 2002 to Mr. Dearholt, a Director of the Company. As of December 31, 2001, Mr. Dearholt beneficially owned 4,101,612 shares of the Company's Common Stock. Mr. Dearholt has agreed that, if the Company requests, he will extend the due date of this note to March 25, 2003 upon the same terms as his prior note extension, and the Company currently plans to extend this note.

In the near term, the Company's management expects operating and capital costs to continue to exceed funds generated from operations, due principally to the Company's fixed manufacturing costs relative to current production volumes and the ongoing need to commercialize the Female Condom around the world. It is estimated that the Company's cash burn rate, with net revenues, is approximately $0.1 million per quarter.

While the Company believes that net revenue from sales of the female condom will eventually exceed operating costs, and that, ultimately, operations will generate sufficient funds to meet capital requirements, the Company can make no assurance that it will achieve such level of operations in the near term or at all. Likewise, the Company can make no assurance that the Company will be able to source all or any portion of its required capital through the sale of debt or equity or, if raised, the amount will be sufficient to operate until sales of the female condom generate sufficient net revenues to fund operations. In addition, any funds raised may be costly to the Company and/or dilutive to its shareholders. If the Company is unable to raise adequate financing when needed, the Company may be required to sharply curtail the Company's efforts to promote the female condom, to attempt to sell certain of its assets and rights or to curtail certain of its operations and may ultimately be forced to cease operations. Currently, the Company is focused on growing its business and, therefore, the Company has made no plans to sell any assets nor has it identified any assets to be sold or potential buyers. All of the Company's assets are also subject to a first security interest by the holders of convertible debentures that the Company issued in May and June 1999. Although the Company repaid the principal amount outstanding under the convertible debentures in May 2001, the holders of the convertible debentures have not acted to terminate the security interest in the Company's assets and a former holder of $1,500,000 of the convertible debentures has alleged that the Company was in default as described in Note 7 to the unaudited financial statements above. The Company disputes the claims made by this holder. If this security interest is not released, any sale of the Company's assets would have to be made subject to this security interest.

IMPACT OF INFLATION AND CHANGING PRICES

Although the Company cannot accurately determine the precise effect of inflation, the Company has experienced increased costs of product, supplies, salaries and benefits, and increased selling, general and administrative expenses. Historically, the Company has absorbed increased costs and expenses without increasing selling prices.
ITEM 2 (C)

The Company sold 120,000 shares of common stock to one investor during November 2001. The Company received cash proceeds of $60,000 from these sales. The Company believes it has satisfied the exemption from the securities registration requirement provided by section 4(2) of the Securities Act and Regulation D promulgated thereunder in this offering since the securities were sold in a private placement to a sophisticated, accredited investor, who provided representations which the Company deemed necessary to satisfy itself that he was an accredited investor and was purchasing for investment and not with a view to resale in connection with a public offering.

In December 2001, the Company borrowed an additional $400,000 under its credit facility and two persons provided guarantees equal in total to the additional $400,000 outstanding under the loan. Each guarantor may be liable to the lender for up to 125% of the guarantor's guarantee amount if the Company defaults under the loan. The Company issued warrants to the guarantors to purchase the number of shares of common stock equal to the guarantee amount of such guarantor divided by the warrant purchase price as of the date of exercise. The warrant purchase price is the price per share equal to 70% of the market price of common stock at the time of exercise, but in no event will the warrant purchase price be less than $0.50 per share or more than $1.00 per share. The Company also issued an additional warrant to purchase 100,000 shares of common stock at an exercise price of $0.50 per share to one of the guarantors. The Company believes it has satisfied the exemption from the securities registration requirement provided by section 4(2) of the Securities Act and Regulation D promulgated thereunder in this offering since the warrants were sold in a private placement to only sophisticated, accredited investors, each of whom provided representations which the Company deemed necessary to satisfy itself that they were accredited investors and were purchasing for investment and not with a view to resale in connection with a public offering.
